Importance of Submarines and the Submarine Industrial Base

U.S. Navy Submarines

Major classifications of modern U.S. submarines:

Nuclear powered attack submarine

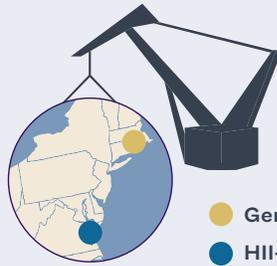

Nuclear powered guided missile submarine

Nuclear powered ballistic missile submarine

SSN and **SSGN** submarines give the Navy unparalleled stealth and strike capability to support Joint Force Operations and carry out intelligence, surveillance and reconnaissance missions. **The Los Angeles Class, Seawolf Class, and Virginia Class** submarines represent the SSN force currently deployed by the Navy, utilizing the most advanced undersea systems that American world-class science, engineering, technology and manufacturing can provide.

The current U.S. SSBN force consists of 14 **Ohio Class** submarines. Ohio Class SSBNs are specifically designed for extended deterrent patrols. Trident II D5 missiles with improved accuracy and range, efficient crew rotations and low maintenance demands maximize the SSBN's strategic availability as well as reduce the number of submarines required to meet strategic requirements and readiness.

Strategic Value and Nuclear Deterrent

An effective nuclear deterrent prevents attacks on the U.S. from countries armed with nuclear and other weapons of mass destruction and is a national security imperative.

SSBNs are the most survivable component of the United States' nuclear triad—comprised of **submarine-launched ballistic missiles, land-based ICBMs and heavy bombers**. Deep in the ocean, with virtually unlimited endurance, these submarines are **capable of reaching any target** at the direction of the President.

SSBNs carry

70%

of the U.S. operational nuclear deterrent arsenal,

using only **1%**

of the Overall Defense Budget

Future of Submarines and Importance of Investment

Our fundamental priority is to design and build the next generation of U.S. submarines while continuing to maintain and modernize the nation's submarine fleet. The submarine industrial base is committed to meeting the Navy's aggressive schedule and cost reduction goals, supporting three major lines of effort:

Columbia Class Ballistic Missile Submarine Program

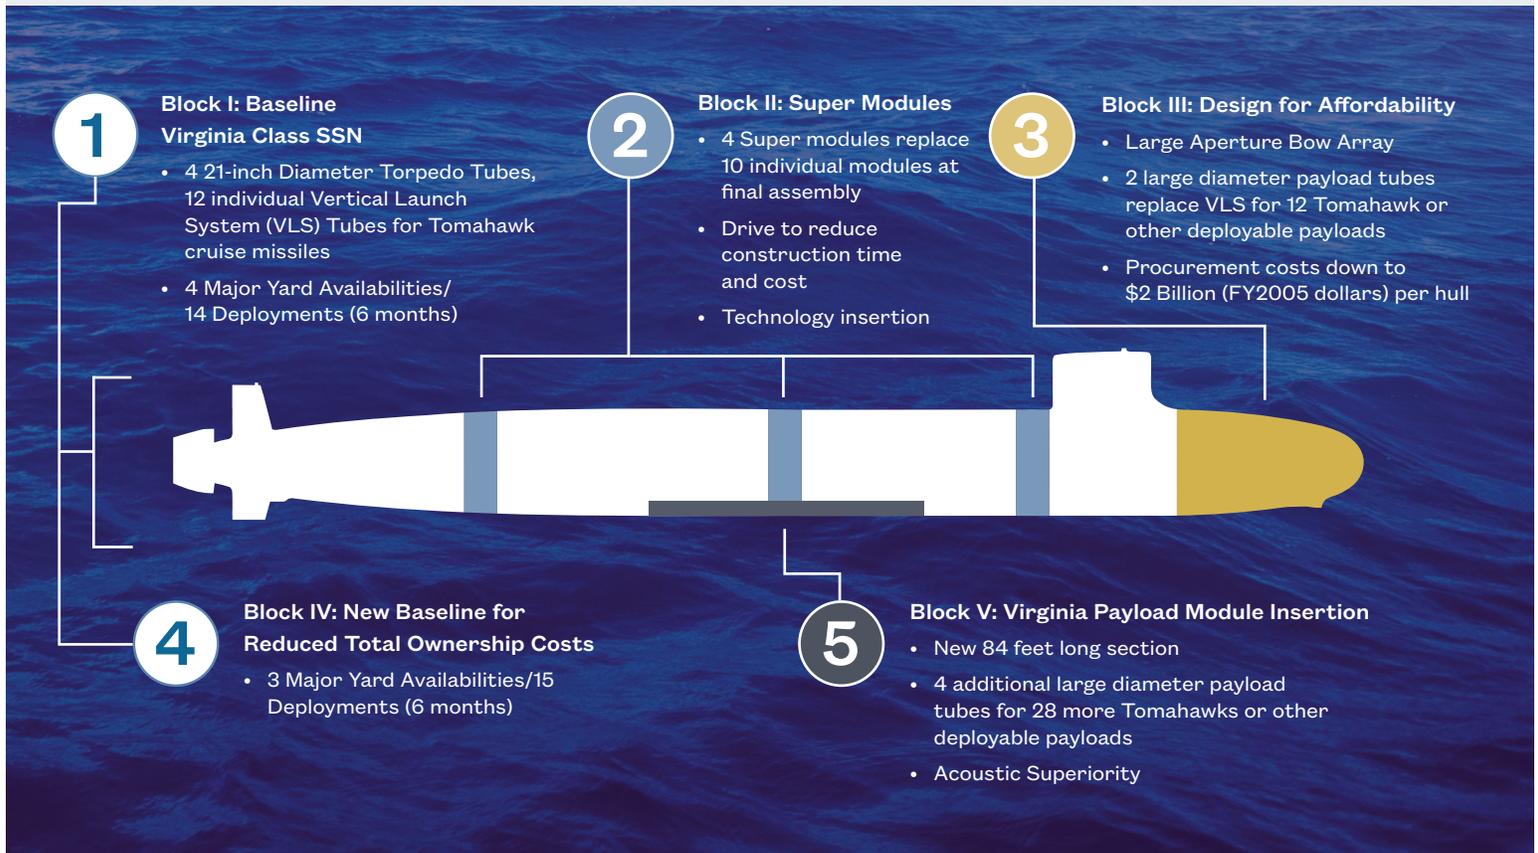

The Columbia Class ballistic missile submarine (SSBN) is the Department of War's #1 priority. It will deliver a minimum of 12 submarines to replace the current Ohio Class fleet and provide strategic deterrence into the 2080s. Construction of the first submarine officially began in October 2020 with the most mature design in our Navy's submarine shipbuilding history. To prevent a gap in U.S. deterrent capabilities when the Ohio Class SSBNs begin to retire, the first Columbia Class SSBN must make its first strategic deterrent patrol in 2030.

Virginia Class Submarine Program

Sustained procurement of multiple Virginia Class submarines per year is essential for the Navy to maintain undersea dominance. Future Virginia Class submarines will be equipped with the Virginia Payload Module (VPM) containing 4 large diameter payload tubes for increased SSN undersea strike capacity and the ability to host a variety of other innovative payloads. Without the incorporation of VPM hulls, the U.S. would lose 60 percent of its undersea strike capacity when the last Ohio Class SSGN retires in the late 2020s. Adding VPMs to future Virginia Class submarines will mitigate this drop and improve payload distribution across the force.

Submarine Force Maintenance and Modernization

This crucial work maintains the nation's submarine fleet, industrial base proficiency, and critical job skillsets. Continuous maintenance and modernization work sustains the stability and core competencies required to ensure a proficient workforce exists when the Virginia Class SSN with VPM and Columbia Class SSBN full rate production plans are executed.

ABOUT THE SIBC

Established in 1992, the Submarine Industrial Base Council seeks to educate policymakers and the public about the need to preserve the strength of the U.S. submarine force and promote the value of the submarine industrial base as a vital part of our national security. SIBC membership is open to the thousands of U.S. companies that provide critical materials to the U.S. submarine programs under development or in production. Member businesses range from the smallest specialty shops to manufacturers of main propulsion equipment.
